Read the following passage and answer the questions below:

A recent investigation by scientists at the USA Geological Survey shows that strange animal behavior might help predict future earthquakes. Investigators found such occurrences in a ten-kilometer radius of the epicenter of a fairly recent quake. Some birds screeched and flew about wildly, and dogs yelped and ran uncontrollably. Scientists believe that animals can perceive these environmental changes as early as several days before the mishap.

In 1976, after observing the animal behavior, the Chinese were able to predict a devastating quake. Although hundreds of thousands of people were killed, the government was able to evacuate millions of others and thus keep the death toll at a lower level.
